

Ajman shoppers in good hands thanks to Polypipe Middle East

Drainage and stormwater solutions selected for mall expansion

City Centre Ajman, a mall in Ajman, UAE, is expanding to offer a wider selection of retail stores and entertainment facilities to its customers.

The project called upon Polypipe Middle East to support the installation of the Terrain Above Ground drainage system and RIDGISTORM-X4, a device used for the treatment of surface water run-off, providing contaminant removal and protection for the downstream elements of the drainage system and local environment.

Polypipe's technical team were able to offer a bespoke solution that met with the specific project requirements for water filtration.

Having pioneered the development of PVC-u solvent-weld systems, Terrain products represent the industry benchmark for quality and innovation. They are manufactured in accordance with British Standards and are approved by local municipalities.

Polypipe Middle East was selected for its quality product selection, and technical proficiency, as well as for its ability to deliver materials on time through its trusted partner network.
