

Polypipe selected for Emaar's luxury shopping destination

Dubai Hills Mall, the latest addition to the premier lifestyle destination, Dubai Hills Estate, is scheduled to open in 2019.

The Emaar Properties complex is worth around \$400m and is expected to feature more than 650 retail and food and beverage attractions.

Working alongside lead consultant and MEP consultant, Arcadis, the leading global natural and built asset design and consultancy firm, and main contractor, Alec, Polypipe Middle East was able to offer ideal drainage and pressure solutions for the project.

Terrain Below Ground and Above Ground Drainage Systems and Effast Pressure Systems were specified by Arcadis due to Polypipe Middle East's proven success on other major mixed-use projects in the region, including Bluewaters Island, The Opus by Zaha Hadid and the Mohammed Bin Rashid Library.

With more than 60 years of heritage in the Middle East, Terrain is trusted and proven to perform in the region's hot climate and demanding conditions. As the first company in the UK to manufacture PVC rainwater and soil and waste systems, Terrain is a true mark of quality in drainage.

Effast is recognised for thermoplastic pipework systems that are highly resistant to chemicals and are built to last.

Application

Drainage Systems and Pressure Systems

Products Used

Terrain Below Ground, Terrain Above Ground and Effast Pressure Systems

Using the latest plastic manufacturing technology to satisfy the requirements of Middle Eastern installers, our Terrain Above and Below Ground range is ideally suited for a range of applications. The range's major advantage is the simplicity it brings to the whole process; by stipulating our Terrain PVC-u pipes, you are automatically choosing a tried and tested, durable product that you can rely on.
