

Terrain seals the deal at new Novotel Hotel

Action Hotels Company chooses market-leading drainage products

Terrain Above and Below Ground drainage solutions have been chosen for a new Novotel Hotel in Dubai.

The four-star hotel, in Dubai Healthcare City, is a 12-storey structure with 220 rooms and a variety of amenities. It's due to be completed in 2018.

Polypipe Middle East was called upon to fit its industry-leading Terrain Above Ground solvent-weld drainage system throughout the building,

providing end-to-end technical support during the process. To ensure an adequate allowance for thermal movement, the system was fitted with expansion ring seal joints to allow for expansion and contraction of the system.

Having pioneered the development of PVC solvent-weld systems, Terrain products represent the industry benchmark for quality and innovation. They are manufactured in accordance with British Standards and are approved by local municipalities.

In addition to offering quality solutions, Polypipe Middle East was able to demonstrate expertise and heritage in the region, having worked on similar projects, including Holiday Inn & Staybridge Suites, and Aloft City Centre Deira.
