

Terrain Below Ground Drainage & Effast installed at Holiday Inn & Staybridge Suites

Polypipe's Terrain below ground drainage and Effast pressure pipework for water services used at hotel complex in Dubai South.

The seven storey, \$150million Holiday Inn & Staybridge Suites complex in Dubai South is scheduled for completion in 2019 in readiness for Expo 2020.

The contractor required quality, reliable construction materials, supplied on time and to exact specifications; Polypipe was the preferred choice.

Polypipe delivers regional expertise, credibility, value-engineering and first-class customer service.

As experts in the manufacture and supply of specialist drainage and water systems for Middle Eastern climatic conditions, Polypipe is known not just for its quality products that will stand the test of time, but for its regional expertise, credibility, value-engineering and first-class customer service.

Polypipe's Terrain below ground drainage and Effast pressure pipework for water services were selected to provide high performance, durability, and reliability, thereby enhancing the life expectancy for the installations and mitigating maintenance requirements.

With a market-leading range of thermoplastic pipework systems, Effast pipes and fittings are extremely versatile. Their rigid construction makes them particularly suitable for building projects such as the swimming pools and spas at the Holiday Inn development.

Polypipe's Terrain below ground drainage system is recognised across the Middle East as being the market leading range of PVCu underground drainage systems, designed

specifically to accommodate normal ground movement and cope with the region's challenging climatic conditions.

With unrivalled technical expertise and experience of similar projects including RP Heights in Downtown Dubai, Polypipe was the ideal choice for the Holiday Inn & Staybridge Suites.

Polypipe delivered quality, reliable construction materials, supplied on time and to exact specifications.
